

## Backup as a Service

### Use Case

Zones Innovation Center is a multidisciplinary and collaborative technology environment that helps transform business use cases into working prototypes. Leveraging technology expertise, OEM alliances, and scalable technology platforms, Zones assists businesses in simplifying and accelerating their digital journeys. This use case showcases 'Backup as a Service' capabilities.

#### Solution Overview:

Zones' Backup as a Service (BaaS) is the data protection solution, which is aligned to business, technology & cost. BaaS offering give removal of ownership, commitment, scalable, elastic solution to the customer. BaaS is compatible with on-prem, cloud or hybrid environment along with O365/M365 and the enterprise Data Center. This is plug & play module, customer environment can be onboarded in no time to the zones backup tenant & backup can be started in the no time.

Being it is a cloud based solution data can be replicated to multiple site for redundancy & offsite purpose. Customer can set the policies (frequency, retention) on demand. The solution is compliant to industry standard & free from risk & loss associated with user error, hacking, or any other kind of technological disaster. Customer can achieve the required RTO & RPO as per the business requirement.

#### Lab video Overview:

For walkthrough today we would be using offering from our partner Veeam. Veeam is known for its modern data protection offerings and industry leading features in owning, controlling, and protecting

data anywhere in the hybrid cloud environment. Veeam allows us to seamlessly backup on-prem as well as cloud workloads. Let us look at the features and how easy it is to back up the critical workload. To showcase we have preconfigured our on-prem ESXi instance in Veeam.
