ZONES™

Innovation Center Use Case: Network Configuration Management

Solution Overview

Network configuration management and change management is an important discipline of ITOM which focuses on the network device management. It primarily tries to control the changes which goes into the network ensuring these are safe and doesn't cause unintended changes. It helps organizations with:

- Reduced network outages
- Automation of changes
- Network device configuration backup & restore
- Compliance

ManageEngine has two offerings which cover NCM domain. One being the standalone product that could help manage NCM needs and other being embedded offering from OpManager. NCM from ManageEngine is a complete product and offers following features

NCM Lab Overview

The purpose of this lab is to have hands-on experience in managing network configuration backup. The NCM server in the lab is configured with the ManageEngine NCM software and is configured to manage the core network devices showcased. The NCM can be explored to understand the features of product for effective understanding.
